XMelt Ice Melter melts more ice, melts it faster and at lower temperatures!

Ready for unbelievable results?

XMelt Ice Melter was designed for the high-performance needs of snow professionals. XMelt Ice Melter is coated with organic corrosion inhibitors (OCI) that greatly enhance the melting capability of chloride based ice melters. X-Melt works by lowering the freezing point of water, rather than working by heat through chemical exothermic reaction. This prevents snow and ice from bonding to the surface of which it is applied.

X-Melt saves you money, reduces corrosive effects on your equipment, and saves labor hours in the field.

- Lower application rates save money
- Requires fewer applications - reduces labor costs
- Coated with organic, anti-icing agents that provide fast acting results - melts snow and ice faster
- Impregnated with organic corrosion inhibitors (OCI) that promote a more environmentally friendly formulation
- Keeps snow and ice from bonding to pavement
- Safer on most surfaces*
- Less harmful to plants, pets, and livestock*
- Less corrosive to steel and concrete*

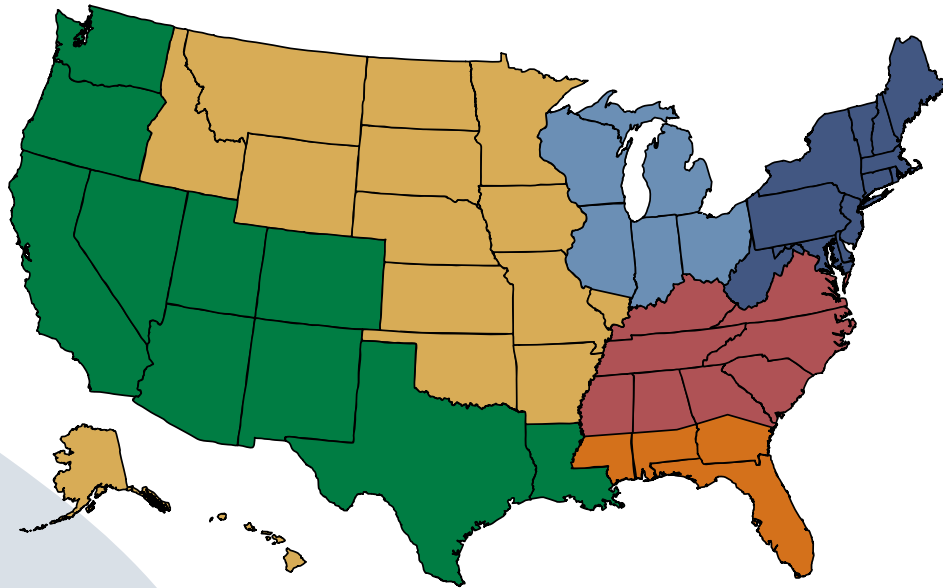

**Compared to conventional ice melters, when used as directed.*

Extra-strength blend With fast-acting melting power to -20°F

X-Melt Ice Melter is coated with organic corrosion inhibitors (OCI) that result in a brine that is less corrosive to steel, asphalt, concrete, and equipment. Organic corrosion inhibitors (OCI) are pure in form having no adverse effects on the surrounding area's ecosystem.

Contains	CAS Numbers
Sodium Chloride	007647-14-5
Potassium Chloride.....	007447-40-7
Calcium Chloride	010043-52-4
Magnesium Chloride	007786-30-2
Corrosion Inhibitor	007746-20-2
